

SUMMARY

This is the documentation for Rustart, you can change this and run it with ‘mask docs’, see README.md for more details.

SOFTWARE ARCHITECTURE

Parts

We start with a docker compose. The pattern used is inspired in Domain Driven Design (DDD) and Clean Architecture. There is an application layer for business logic, domain for pure entities that closely relate to the data modeled and impure entities for any differentiation in that due to an implementation limitation. Infrastructure is for the relationship to outside services such as repositories and controllers.
